## Matematylia dystretna, Repetitionium 11, 07/01/2020

Zadamie 8.

13,16,18 - za tudne en

Show me ma Tuhou z s do x ani z A do x, to sg Tuhi z x do s ovaz x do a dla hardego a e A. Ponadto deg (x) > deg cut (s).

Zadamie 5.

Jesti G ma cykl Eulera,
to musi on tyle samo vary
opunoruí X co do virgo
welwohió, tzn. 2 | E(X,VXX) |.

Jesli X<sub>11</sub>, X<sub>21</sub>,..., X<sub>k</sub> to stradove spojnosti G-v, to:

Vi: 1≤i≤k: E(v, Xi) jest minimalnym cigciem, zatem ma panysty moc. To ornacm, ze:

 $deg(v) = \sum_{1 \le i \le k} |E(v_i X_i)| \text{ jest panyly.}$ 

## Zardanie 4. Digraf Eulerousli (=> spsjny i VveV degin(v) = deg out (v). (x)

=> proste

(= Zacrynajge od donolnego menchotha, w haidyn menchotha nybienany dondneg krawedź nychodrycy dotychozas menigty. Ze

Wzgljdu na (\*) zahońcnymy w poczythonym wienchothu, uzyslując pemien cyhl. Jeśli Istureją nieużyte luanydnie grafu, to pontanum ponyżną honstunkije zaczynając od menchotha obecnego cyhlu, lutry wciąż ma noewijte luanydne. W tym hienchothu Igerymy cyhle w jeden.

Zadanie 2.

Jesti G izomaficzy z G, to  $|\mathbf{E}(G)| = |\mathbf{E}(G)| = \frac{n(n-1)}{4} \in \mathbb{N}$ , to  $n \equiv 0 \pmod{4}$  lub  $n \equiv 1 \pmod{4}$ .

(petre)

(puste) Loisy meraleine

Zadame 11.

18 pot bolom C, 12 pol bolom B

Dzieliny cyhl na fragmenty typu:

C-B-C  $\Delta col = 0$ C-C  $\Delta col = 1$ (C ma mage  $\frac{1}{2}$ , B m1)

Zartamie 18.

Cyll dlugosii 2 (a+b-2), najaluissy es grafie x, y sg polycrone sweilig dlugosii ab-1
